

Maximum Stresses Under Concentrated Loads, Treated Graphically

Filesize: 1.2 MB

Reviews

This publication is wonderful. It can be rally fascinating throgh reading period of time. You are going to like the way the writer create this publication.

(Mrs. Piper Jacobi)

MAXIMUM STRESSES UNDER CONCENTRATED LOADS, TREATED GRAPHICALLY

DOWNLOAD

Rarebooksclub.com, United States, 2012. Paperback. Book Condition: New. 246 x 189 mm. Language: English . Brand New Book ***** Print on Demand *****.This historic book may have numerous typos and missing text. Purchasers can download a free scanned copy of the original book (without typos) from the publisher. Not indexed. Not illustrated. 1890 Excerpt: .It is as follows: Engineering News, October 12th, 1889. Take the expressions already given in Art. 6 for S and S the shears just at the left of C and C respectively, in which the last terms are the total loads to the left of these points. Let C and C be situated at the wheels at which the shears are to be compared. Then the final summations in the expressions for S and S will not include the wheel weights at C and C respectively. In order to find the point where two wheels produce the same shear, let $S = S$, and equating their values as given in Art. 6, transposing, canceling, etc., we have $B B C^2 W_b - 2 W_b = 12 W$ (23) $A A C$ in which $b - b$ for any wheel is the distance which it is necessary to move the train to bring one of the wheels considered to the position previously occupied by the other. The first term in equation (23) is the height of the moment polygon above 00, the zero line of moments at the vertical through B . The second term is the height of the moment polygon above 00 at the vertical through B The distance between the verticals at B and B is $b - b = d$, the distance apart of the wheels under which the shears are taken as equal. Hence the first member of equation (23) is the difference in...
