SOILS OF THE EASTERN UNITED STATES AND THEIR USE XIV, VOL. 36: THE FARGO CLAY LOAM (CLASSIC REPRINT)

Forgotten Books, United States, 2015. Paperback. Book Condition: New. 229 x 152 mm. Language: English . Brand New Book ***** Print on Demand *****.Excerpt from Soils of the Eastern United States and Their Use XIV, Vol. 36: The Fargo Clay Loam In the better drained areas it is usually grayish brown or gray or drab, while at greater depths and in localities where the drainage is poor the subsoil is of lighter drab or bluish color. It is a marked characteristic of the Fargo clay loam, wherever it has been encountered, that the subsoil is highly calcareous. A large number of determinations of calcium carbonate have been made in connection with the study of this soil type, and in the majority of cases the calcium carbonate content of the subsoil of the Fargo clay loam has ranged from 3 1/2 to as high as 24 percent. This is unusually high when compared with the lime content of other soils and subsoils. This characteristically calcareous subsoil distinguishes the Fargo clay loam from the black soils of the Clyde series, while the Fargo clay loam is distinguished from the dark-colored soils of the Washburn series, in that the latter contain considerable quantities of stone, while the soils of the Benoit series are underlain by a substratum of gravel. The Fargo clay loam is distinguishable from the Carrington black clay loam through the fact that it occupies the beds of extinct glacial lakes of some size, while the Carrington black clay loam consists of an accumulation of dark-colored surface material overlying glacial till which frequently constitutes the subsoil of that type. Surface Features And Drainage. In all areas where it has been encountered the topography of the Fargo clay loam is marked by the almost level character of the land surface. The slopes...
